Information about Copyrighted Content

ICPSR Processing Notes

1. ICPSR distributes the public and restricted use versions of the data file in five data formats: SAS, Stata, SPSS, tab-delimited plain text, and column-delimited plain text with a SPSS setup. ICPSR generated these files from the original SPSS data file provided by the principal investigator.

2. The missing value denoted by a dot in the Stata, SAS and SPSS data files is represented as a blank field in the plain text data files.

3. ICPSR compiled this codebook from materials provided by the principal investigator and materials prepared by ICPSR. The ICPSR Processing Notes and the Frequencies and Descriptive Statistics (the last section of the codebook) constitute the materials prepared by ICPSR.

4. The last section of the codebook (Frequencies and Descriptive Statistics) includes the column locations of the variables in the column-delimited plain text data file (both the public and restricted use versions, which have the same record layout).

5. Variable labels longer than 80 characters were truncated to 80 characters in the Stata data file because the maximum length of a variable label in Stata is 80 characters. Complete variable labels are provided as variable notes in the Stata file whenever a variable label is longer than 80 characters.

6. The value 99.9 denotes "Refused" for the variable bmi (body mass index).

7. For reasons of confidentiality ICPSR recoded the variables state (state postal code), dma (Nielsen DMA), countyc (county FIPS), and division (census division) to a blank field or the missing value denoted by a dot in the public use version of the data. The restricted use version of the data file contains the four restricted variables in their original form. Apply for access to the restricted use file through the ICPSR restricted data contract portal which can be accessed via the study home page.

2014 Healthy Americas Survey
Key findings on the Affordable Care Act (ACA)
Topline and Methodology Report • March 13, 2014

Healthy Americas Survey

This study was conducted for the National Alliance for Hispanic Health (NAHH) by telephone by SSRS, an independent research company via the SSRS EXCEL Omnibus. Interviews were conducted from February 16 – March 2, 2014 among a nationally representative sample of 846 respondents age 18 and older. The margin of error for total respondents is +/-3.4% at the 95% confidence level. The margin of error for total White/Non-Hispanics (n=260) is +/-6.1%, the margin of error for Black/Non-Hispanics (n=286) is +/-5.8%, the margin of error for Hispanics (n=300) is +/-5.7%,

Health Status, Access, Prevention, and Healthy Lifestyle Questions HA-1 to HA-42 to be released April 2014 as part of Minority Health Month.

Health System Changes

(Asked of total selected respondents; Total n = 846, White/Non-Hisp n= 260, Black/Non-Hisp n= 286, Hispanic n=300, Hisp Insured n=218, Hisp Uninsured n=82)

HA-43.   The next questions ask about the health care law, known as the Affordable Care Act. Is your opinion of the law – very favorable, somewhat favorable, neither favorable nor unfavorable, somewhat unfavorable, or very unfavorable?

	Total	White/Non-Hisp	Black/Non-Hisp	Hisp	Hisp Insured	Hisp Uninsured
Very/Somewhat favorable (NET)	40	31	76	47	46	50
Very favorable	16	11	40	20	22	17
Somewhat favorable	23	20	36	27	23	34
Neither favorable nor unfavorable	16	16	8	22	23	22

HA-44. As you may know, the health care law creates health insurance exchanges or marketplaces where people can shop for insurance and compare prices and benefits. How much, if anything, have you heard about this new health insurance marketplace,also known as [if the respondent is in a state with state-specific names insert program name and state website] healthcare.gov], in your state? Have you heard a lot, some, only a little, or nothing at all?

	Total	White/Non-Hisp	Black/Non-Hisp	Hisp	Hisp Insured	Hisp Uninsured
A lot/some (NET)	57	60	57	44	48	36
A lot	32	33	34	25	29	19

Refused	2	2	*	--	--	--

(Asked of total selected respondents; Total n = 846, White/Non-Hisp n= 260, Black/Non-Hisp n= 286, Hispanic n=300, Hisp Insured n=218, Hisp Uninsured n=82)

HA-46.   The health care law requires nearly all Americans to have health insurance by March 31, 2014 or else pay a fine. This is sometimes referred to as the "individual mandate". How much, if anything, have you heard about this requirement? Have you heard a lot, some, only a little, or nothing at all?

	Total	White/Non-Hisp	Black/Non-Hisp	Hisp	Hisp Insured	Hisp Uninsured

Thank you for your participation to help us better understand health care in communities.

METHODOLOGY

Overview

The National Alliance for Hispanic Health (NAHH) contracted with Social Science Research Solutions/SSRS to conduct the 2014 Healthy Americas Survey from February 16 – March 2, 2014 via the SSRS Omnibus. The goal of the study was to survey approximately 300 Hispanics, 250 Black non-Hispanics, and 250 White non-Hispanics. The battery of question topics included Health status and lifestyle, preventative screenings and vaccines, chronic health conditions, access to healthcare and quality of sources available, and changes to the healthcare system.

The Healthy Americas Survey is an initiative of the Healthy Americas Institute of the National Alliance for Hispanic Health at the University of Southern California (USC). The 2014 Healthy Americas Survey received support from the Healthy Americas Foundation and a grant from the Robert Wood Johnson Foundation.

This study collected a final sample of 846 adults age 18 and older. The composition of the final sample included 260 White non-Hispanics, 286 Black non-Hispanics, and 300 Hispanics. This report is organized into four sections. The first section discusses the sample design. The second section describes data collection and fielding. The third and fourth sections address weighting procedures and the response rate to the survey.

I. Sample Design

SSRS's Omnibus is a weekly telephone omnibus survey. Each Omnibus survey consists of a minimum of 1,000 interviews, of which 500 interviews are completed with respondents on their cell phones and at least 35 are conducted in Spanish. Completes are representative of the United States population of adults 18 and older. *EXCEL* uses a fully-replicated, stratified, single-stage, random-digit-dialing (RDD) sample of telephone households, and randomly generated cell phones. Sample telephone numbers are computer generated and loaded into on-line sample files accessed directly by the CATI system. Within each sample household, a single respondent is randomly selected. Each *EXCEL* is composed of two distinct parts. The first is a series of inserts contracted for by our clients; these inserts may range from a single closed-ended question to a twenty-minute battery of open and closed-ended questions.
For this study, the Healthy Americas questionnaire was approximately 20 minutes were included in 4 waves of the SSRS Omnibus.

II. Field Preparations, Fielding and Data Processing

The Healthy Americas questionnaire was developed by the NAHH research team in consultation with the SSRS project team. Upon review, SSRS proposed changes to the NAHH team and agreed upon changes were incorporated into the final questionnaire.

Prior to the field period, SSRS programmed the study into CfMC Computer Assisted Telephone Interviewing (CATI). Extensive checking of the program was conducted to assure that skip patterns followed the design of the questionnaire. Additionally, where noted the CATI system ensured that that the listed attributes automatically rotated, eliminating "question position" bias.

Translation of the questionnaire into Spanish
Upon approval of a final English instrument by the NAHH research team, the instrument was translated into Spanish by CETRA Language Solutions. The translated version was then sent to the NAHH research team for verification by their translator and final approval. CATI interviewers received written materials on the study and formal training on the questionnaire. The written materials were provided prior to the beginning of the field period and included an annotated questionnaire that contained information about the goals of the study as well as detailed explanations of why questions were being asked, the meaning and pronunciation of key terms, potential obstacles to be overcome in getting good answers to questions, and respondent problems that could be anticipated ahead of time as well as strategies for addressing the potential problems.

Interviewer training was conducted immediately before the survey was officially launched. Call center supervisors and interviewers were walked through each question from the questionnaire. Interviewers were given instructions to help them maximize response rates and ensure accurate data collection.

Fielding
This study was in the field from February 16 – March 2, 2014 The telephone interviewing was conducted by SSRS/Social Science Research Solutions via the SSRS Omnibus. All interviews were conducted using the CATI system. The CATI system ensured that questions followed logical skip patterns and that complete dispositions of all call attempts were recorded. In order to achieve a maximized response rate, SSRS:

- Instituted a call rule to maximize the response rate. On average, at least six calls were attempted on all no answers, busies, and answering machines before considering a sampling unit "dead". However, many households received more than six calls over the course of the field period in an effort to increase the yield of the prescreened sample.
- Utilized a core group of specially-trained and highly-experienced refusal conversion interviewers to call initial refusals in an attempt to persuade respondents to complete the survey.
- Varied the times of day and the days of the week that callbacks were placed.
- Explained to interviewers the purpose of the study and stated as accurately as possible the expected length of the interview.
- Conducted intensive interviewer training before the survey was launched and periodically during the field.
- Called back any Spanish language barriers that were reached with a non-bilingual interviewer utilizing a bilingual interviewer.

Deliverables
- Weighted SPSS data file
- Weighted crosstabulations of completed interviews
- Topline document
- Final report on survey methodology

Data preparation began soon after the study entered the field and continued through the field period. Data were thoroughly cleaned with a computer validation program. Additionally, all variables were checked by the project team to ensure that data collection corresponded to the designated skip patterns and programming instructions.

III. Weighting Procedures

Each wave of the Omnibus is weighted to provide nationally representative and projectable estimates of the adult population 18 years of age and older. The weighting process begins with a base weight that takes into account the disproportionate probabilities of household selection due to the number of separate telephone lines and the probability associated with the random selection of an individual household member. The base weight also corrects for the disproportionate probability of selection with regard to the oversampling of diabetics.

With the base weight applied, the sample is then balanced to match known adult-population parameters based on the most recent U.S. Census American Community Survey (ACS), utilizing an iterative proportional fitting (IPF) or "raking" weighting procedure.

For this study, we developed adult-population parameters for White non-Hispanics, non-Hispanic African Americans, and Hispanics separately. The population parameters used for post-stratification included: age (18-24; 25-34; 35-44; 45-54; 55-64; and 65+) by gender, Census region (Northeast, North-Central, South, West) by race (white/non-white), Education (less than high school, high school graduate, some college, four-year college or more), density (quintiles of the population density, number of people per square mile) and phone-usage (CPO, LLO, DF). Each separate rake was balanced to the proper population distribution for Whites, African Americans, and Hispanics, so that when put together as an overall weight, each group is in its correct proportions.

IV. Response Rate

The response rates for this study were calculated using AAPOR's RR3 formula. Dispositions and response rates by sample type are provided below. The final combined response rate for the study is 11.4%.

	Landline	Cell	Overall
	Total	Total	
Eligible, Interview (Category 1)			
Complete	389	457	846
Eligible, non-interview (Category 2)

Healthy Americas Survey

This study was conducted for the National Alliance for Hispanic Health (NAHH) by telephone by SSRS, an independent research company via the SSRS EXCEL Omnibus. Interviews were conducted from February 16 – March 2, 2014 among a nationally representative sample of 846 respondents age 18 and older. The margin of error for total respondents is +/-3.4% at the 95% confidence level. The margin of error for total White/Non-Hispanics (n=260) is +/-6.1%, the margin of error for Black/Non-Hispanics (n=286) is +/-5.8%, the margin of error for Hispanics (n=300) is +/-5.7%. The questions reported here were part of a larger survey with questions on the first open enrollment period of the Affordable Care Act (ACA) asked following this set of questions. The report on the ACA questions can be found at: http://www.healthyamericasinstitute.org/healthy-americas-survey.html

*Totals for Hispanic uninsured for all questions and responses for Non-Hispanic white, non-Hispanic black, and Hispanic for questions HA7, HA25, HA34, and HA42 were asked of sample sizes (n=<100) that are relatively small and should be treated with some caution.

Health Status

First I would like to ask you a few questions about your overall health.

(Asked of total selected respondents; Total n = 846, White/Non-Hisp n= 260, Black/Non-Hisp n= 286, Hispanic n=300, Hisp Insured n=218, Hisp Uninsured n=82*)
HA-1.   In general, would you say your health is excellent, very good, good, fair, or poor?

3/2/14	Total	White/Non-Hisp	Black/Non-Hisp	Hisp	Hisp Insured	Hisp Uninsured
Excellent/very good (NET)	52	56	47	38	49	18
Excellent	21	22	23	15	17	10
Very good	31	35	23	24	32	08
Good	29	29	26	27	28	26
Fair/poor (Net)	19	14	27	34	22	56
Fair	14	10	19	27	19	44
Poor	5	4	8	7	4	13
Don't Know	*	*	--	--	--	--
Refused	*	1	--	*	1	--

Healthy Americas Institute
National Alliance for Hispanic Health at
the University of Southern California (USC)

HealthyAmericasInstitute.org

(Asked of total selected respondents; Total n = 846, White/Non-Hisp n= 260, Black/Non-Hisp n= 286, Hispanic n=300, Hisp Insured n=218, Hisp Uninsured n=82*)

HA-2.   Now, thinking about your physical health, which includes physical illness and injury, for how many days during the past 30 days was your physical health not good?

	Total	White/Non-Hisp	Black/Non-Hisp	Hisp	Hisp Insured	Hisp Uninsured
Zero	61	64	54	56	56	54

Access to Health Care
The following questions are about use of health care services.

(Asked of total selected respondents; Total n = 846, White/Non-Hisp n= 260, Black/Non-Hisp n= 286, Hispanic n=300, Hisp Insured n=218, Hisp Uninsured n=82*)

HA-28. Is there a place that you usually go to when you are sick or need advice about your health?

	Total	White/Non-Hisp	Black/Non-Hisp	Hisp	Hisp Insured	Hisp Uninsured
Yes	88	93	83	73	81	57
No	12	7	17	27	19	43
Don't Know	--	--	--	--	--	--
Refused	*	--	*	--	--	--

(Asked of total selected respondents who have a usual place that they go to when they are sick or need advice about their health; Total n = 714, White/Non-Hisp n= 243, Black/Non-Hisp n= 248, Hispanic n=223 Hisp Insured n=177, Hisp Uninsured n=46*)

HA-29. What kind of place is it - a community clinic or health center, doctor's office or HMO, hospital emergency room, hospital outpatient department, pharmacy-based clinic, or some other place?

	Total	White/Non-Hisp	Black/Non-Hisp	Hisp	Hisp Insured	Hisp Uninsured
Community clinic or health center	19	15	25	35	26	60
Doctor's office or HMO	70	77	55	46	57	16
Hospital emergency room	3	1	9	10	8	16
Hospital outpatient department	2	1	9	1	1	--
Pharmacy-based clinic	1	1	*	2	2	1
VA/military hospital	1	1	1	2	2	--
Some other place	2	2	1	3	3	3
Doesn't go to one place most often	*	1	*	*	--	1

Refused	6	12	13	--	--	--

METHODOLOGY

Overview

The National Alliance for Hispanic Health (NAHH) contracted with Social Science Research Solutions/SSRS to conduct the 2014 Healthy Americas Survey from February 16 – March 2, 2014 via the SSRS Omnibus. The battery of question topics included Health status and lifestyle, preventative screenings and vaccines, chronic health conditions, access to healthcare and quality of sources available, and changes to the healthcare system. This study collected a final sample of 846 adults age 18 and older. The composition of the final sample included 260 White non-Hispanics, 286 Black non-Hispanics, and 300 Hispanics. This report is organized into four sections. The first section discusses the sample design. The second section describes data collection and fielding. The third and fourth sections address weighting procedures and the response rate to the survey.

I. Sample Design

SSRS's Omnibus is a weekly telephone omnibus survey. Each Omnibus survey consists of a minimum of 1,000 interviews, of which 500 interviews are completed with respondents on their cell phones and at least 35 are conducted in Spanish. Completes are representative of the United States population of adults 18 and older. *EXCEL* uses a fully-replicated, stratified, single-stage, random-digit-dialing (RDD) sample of telephone households, and randomly generated cell phones. Sample telephone numbers are computer generated and loaded into on-line sample files accessed directly by the CATI system. Within each sample household, a single respondent is randomly selected. Each *EXCEL* is composed of two distinct parts. The first is a series of inserts contracted for by our clients; these inserts may range from a single closed-ended question to a twenty-minute battery of open and closed-ended questions. The second part is a standard panel of demographic questions. For this study, the Healthy Americas questionnaire was approximately 20 minutes were included in 4 waves of the SSRS Omnibus fielded between February 16 – March 2, 2014.

II. Field Preparations, Fielding and Data Processing

The Healthy Americas questionnaire was developed by the NAHH research team in consultation with the SSRS project team. Upon review, SSRS proposed changes to the NAHH team and agreed upon changes were incorporated into the final questionnaire. Prior to the field period, SSRS programmed the study into CfMC Computer Assisted Telephone Interviewing (CATI). Extensive checking of the program was conducted to assure that skip patterns followed the design of the questionnaire. Additionally, where noted the CATI system ensured that that the listed attributes automatically rotated, eliminating "question position" bias.

Translation of the questionnaire into Spanish
Upon approval of a final English instrument by the NAHH research team, the instrument was translated into Spanish by CETRA Language Solutions. The translated version was then sent to the NAHH research team for verification by their translator and final approval. CATI interviewers received written materials on the study and formal training on the questionnaire. The written materials were provided prior to the beginning of the field period and included an annotated questionnaire that contained information about the goals of the study as well as detailed explanations of why questions were being asked, the meaning and pronunciation of key terms, potential obstacles to be overcome in getting good answers to questions, and respondent problems that could be anticipated ahead of time as well as strategies for addressing the potential problems.

Interviewer training was conducted immediately before the survey was officially launched. Call center supervisors and interviewers were walked through each question from the questionnaire. Interviewers were given instructions to help them maximize response rates and ensure accurate data collection.

Fielding

This study was in the field from February 16 – March 2, 2014 The telephone interviewing was conducted by SSRS/Social Science Research Solutions via the SSRS Omnibus. All interviews were conducted using the CATI system. The CATI system ensured that questions followed logical skip patterns and that complete dispositions of all call attempts were recorded. In order to achieve a maximized response rate, SSRS:

- Instituted a call rule to maximize the response rate. On average, at least six calls were attempted on all no answers, busies, and answering machines before considering a sampling unit "dead". However, many households received more than six calls over the course of the field period in an effort to increase the yield of the prescreened sample.
- Utilized a core group of specially-trained and highly-experienced refusal conversion interviewers to call initial refusals in an attempt to persuade respondents to complete the survey.
- Varied the times of day and the days of the week that callbacks were placed.
- Explained to interviewers the purpose of the study and stated as accurately as possible the expected length of the interview.
- Conducted intensive interviewer training before the survey was launched and periodically during the field.
- Called back any Spanish language barriers that were reached with a non-bilingual interviewer utilizing a bilingual interviewer.

Deliverables
- Weighted SPSS data file
- Weighted crosstabulations of completed interviews
- Topline document
- Final report on survey methodology

Data preparation began soon after the study entered the field and continued through the field period. Data were thoroughly cleaned with a computer validation program. Additionally, all variables were checked by the project team to ensure that data collection corresponded to the designated skip patterns and programming instructions.

III. Weighting Procedures

Each wave of the Omnibus is weighted to provide nationally representative and projectable estimates of the adult population 18 years of age and older. The weighting process begins with a base weight that takes into account the disproportionate probabilities of household selection due to the number of separate telephone lines and the probability associated with the random selection of an individual household member. The base weight also corrects for the disproportionate probability of selection with regard to the oversampling of diabetics.

With the base weight applied, the sample is then balanced to match known adult-population parameters based on the most recent U.S. Census American Community Survey (ACS), utilizing an iterative proportional fitting (IPF) or "raking" weighting procedure.

For this study, we developed adult-population parameters for White non-Hispanics, non-Hispanic African Americans, and Hispanics separately. The population parameters used for post-stratification included: age (18-24; 25-34; 35-44; 45-54; 55-64; and 65+) by gender, Census region (Northeast, North-Central, South, West) by race (white/non-white), Education (less than high school, high school graduate, some college, four-year college or more), density (quintiles of the population density, number of people per square mile) and phone-usage (CPO, LLO, DF). Each separate rake was balanced to the proper population distribution for Whites, African Americans, and Hispanics, so that when put together as an overall weight, each group is in its correct proportions.

IV. Response Rate

The response rates for this study were calculated using AAPOR's RR3 formula. Dispositions and response rates by sample type are provided below. The final combined response rate for the study is 11.4%.

	Landline	Cell	Overall
	Total	Total	
Eligible, Interview (Category 1)			
Complete	389	457	846
Eligible, non-interview (Category 2)			
Refusal (Eligible)	477	699	1177
Break-off	604	579	1184
Answering machine household-no message left	424	1106	1530
Unknown eligibility, non-interview (Category 3)			
Always busy	3221	438	3659
No answer	50931	25416	76347
Call blocking	163	195	358
Answering machine, don't know if household	1821	8384	10205
Housing unit, unknown if eligible respondent	0	0	0
No screener completed	7508	9869	17377
